## INTRODUCTION

In an effort to reduce the administrative costs of health care across the nation, the Health Insurance Portability and Accountability Act (HIPAA) was passed in 1996. This legislation requires that health insurance payers in the United States comply with the electronic data interchange (EDI) standards for health care, established by the Secretary of Health and Human Services (HHS). For the health care industry to achieve the potential administrative cost savings with EDI, standard transactions and code sets have been developed and need to be implemented consistently by all organizations involved in the electronic exchange of data. The ANSI X12N 837 Health Care Claim: Professional transaction implementation guide provides the standardized data requirements to be implemented for this transaction.

---

## PURPOSE

The purpose of this document is to provide the information necessary to submit Health Care Claim Status Inquiry transactions electronically to MVP Health Care. **This companion guide is to be used in conjunction with the ANSI X12N implementation guides.** The companion guide supplements, but does not contradict or replace any requirements in the implementation guide. The HIPAA implementation guides can be obtained from the Washington Publishing Company by calling 1-800-972-4334 or are available for download on their web site at [www.wpc-edi.com/hipaa/](http://www.wpc-edi.com/hipaa/). ### Communication Specifications

MVP currently supports the receipt of the 837, Health Care Claim: Professional, in batch mode only. The file can be uploaded via the Internet, SFTP (Secure File Transfer Protocol) or FTP (File Transfer Protocol) – with PGP encryption.

File naming conventions will be assigned at part of the testing process.

MVP will transmit the 997, Unsolicited Claim Status, in batch mode to its trading partners. The file can be downloaded via the Internet, SFTP (Secure File Transfer Protocol) or FTP (File Transfer Protocol) – with PGP encryption.

File naming conventions will be assigned at part of the testing process.

MVP will transmit the 277, Unsolicited Claim Status, in batch mode to its trading partners. The file can be downloaded via the Internet, SFTP (Secure File Transfer Protocol) or FTP (File Transfer Protocol) – with PGP encryption.

File naming conventions will be assigned at part of the testing process.

### Use of NPI

MVP requires all providers and facilities to use their National Provider Identifier (NPI) number on all electronic transactions covered by HIPAA.

This means that when billing, providers and facilities must use NPI numbers not only for the billing, pay to, and rendering fields, but also for all secondary provider fields such as referring and supervising provider when used. ***Tax ID number may only be used in connection with the billing or pay to provider loop.***

MVP requires providers with multiple specialties to submit their service location with ZIP + 4 and their taxonomy number.

Providers and facilities must ***not*** include their existing MVP provider ID or any secondary provider identifier in any of the provider loops except for TIN as required for billing/pay to loops.

If a provider or facility uses a MVP provider ID or any secondary provider identifier for electronic transactions, MVP will reject them for NPI non-compliance.

## Delimiters Supported

A delimiter is a character used to separate two data elements or sub-elements, or to terminate a segment. Delimiters are specified in the interchange header segment, ISA. The ISA segment is a 105 byte fixed length record. The data element separator is byte number 4; the component element separator is byte number 105; and the segment terminator is the byte that immediately follows the component element separator. Once specified in the interchange header, delimiters are not to be used in a data element value elsewhere in the transaction.

Description	Default Delimiter
Data element separator	* Asterisk
Sub-element separator	: Colon
Segment Terminator	~ Tilde

MVP will support these default delimiters or any delimiter specified by the trading partner in the ISA / IEA envelope structure.

## Implementation of Health Care Claim: Professional

There will be four phases of implementation.

1. Development Phase - An MVP appointed Representative would contact the client to review these procedures. MVP will set up a client specific profile to receive claim submissions, process claims, and send acknowledgments and business edit reports. In response, the client will create or modify their programs as necessary to provide MVP with the required data and to receive required data from MVP.
2. Test Phase – The client must notify MVP when they are ready to begin submitting test files. MVP and the client will set up a schedule to receive and send data across the desired media. Upon receiving the file, MVP will validate the file format and data for accuracy. MVP will run the file through the claim submission process, which will do a series of error checking. Upon completion of the claim submission process, a response will be created. MVP will identify any errors that will assist client with submitting clean claim submissions. The MVP IT Representative will test and identify all technical errors. During the testing phase, the EDI Coordinator will be responsible for the education of providers/hospitals with regard to EDI errors/failures. The Client will review and discuss any questions or problems with MVP. The goal will be to achieve a 100% HIPAA compliant claim submission, **and 80% or better for business edits** prior to going live.
3. Production - Once testing has reached an acceptance level and both parties have signed off, MVP will move the process into production and go live with the claim submissions. **For denied claims, call Provider Relations / Provider Claim Services.** All transaction error questions should be directed to the EDI Coordinators: 1-877-461-4911.
4. Post Production - MVP will closely monitor the client's claim submissions. MVP will insure that the client's claim submissions are being received, processed; an acknowledgement and business edit report is created and delivered to the client's mailbox properly
